

December 1, 2025

Dear Water Customer,

City of Huber Heights  
6131 Taylorsville Rd.  
Huber Heights, OH 45424  
937.233.1423  
937.233.1272 fax  
[www.hhoh.org](http://www.hhoh.org)

The Environmental Protection Agency (EPA) is requiring all Public Water Service Providers (PWSP) to determine if any part of the water service line is lead pipe. Based on the age of our water system, it is highly unlikely that your water service is lead. However, the EPA requires that the City of Huber Heights, as your water provider, has historical records of the material or performs a visual inspection to confirm the specific pipe material.

If the service line material has not been visually inspected, the Environmental Protection Agency is requiring water service providers to notify the water customer that the service line material is "Unknown" (see Page 2 of this document for more information).

Feel free to disregard this notice if:

- You participated in the homeowner Water Service Identification program last year and successfully completed the online identification or completed a form supplied by Huber Heights.
- Your meter has been replaced this year as part of the city-wide Meter Replacement Program.
- Your service line has been verified as "Non-Lead (System owned), Non-Lead (Customer owned)" as shown with a **Blue** symbol (●) on the online Service Line Inventory Map available on the Huber Heights website under *Services/Water Wastewater Services/Water Service Line Inventory*.

The City of Huber Heights will continue acquiring the service line information for the next few years as part of the Meter Replacement Program. However, until all the service line materials have been visually verified, you may receive this notice annually.

***Once again, the attached notice is for Information Only.***

Sincerely,

Russell Bergman, P.E.  
City Engineer

## City of Huber Heights Water Consumer

### Re: Notification of Lead Status Unknown (System side), Unknown (Customer side) Service Line

Dear Consumer:

The City of Huber Heights is the public water system (PWS) responsible for providing drinking water to this location. This notification is being sent because this home or building has a lead status unknown service line. This means that your service line material is unknown and may be lead, galvanized requiring replacement, or a non-lead material (Copper or Plastic). A service line is a pipe that connects the water main to the building.

#### What Does This Mean?

Under the authority of the Safe Drinking Water Act, the US Environmental Protection Agency (EPA) requires us to notify water consumers who are served by a lead status unknown service line. A lead status unknown service line is where the service line material is not known to be lead, galvanized requiring replacement, or a non-lead service line, and there is no documented evidence supporting the material classification.

#### What are the Health Effects of Lead?

There is no safe level of lead in drinking water. Exposure to lead in drinking water can cause serious health effects in all age groups, especially pregnant people, infants (both formula-fed and breastfed), and young children. Some of the health effects to infants and children include decreases in IQ and attention span. Lead exposure can also result in new or worsened learning and behavior problems. The children of persons who are exposed to lead before or during pregnancy may be at increased risk of these harmful health effects. Adults have increased risks of heart disease, high blood pressure, and kidney or nervous system problems. Contact your health care provider for more information about your risks.

#### What Can I Do to Reduce Exposure to Lead if Found in My Drinking Water?

- **Do not boil water to remove lead.** Boiling water will not reduce lead.
- **Flush your tap if it has been unused for 6 or more hours.** Lead levels increase over time as water sits in lead-containing plumbing materials. Regular water usage in your home or building can reduce lead levels in drinking water. When water has not been used for 6 hours or more, homes and buildings served by lead or a galvanized requiring replacement service lines should be flushed until you note a temperature change, then flush for one more minute.
- **Use cold water for cooking, drinking, and preparing baby formula.** Do not cook with, drink, or make baby formula from your hot water tap. Lead dissolves more easily in hot water. Always use cold water and heat if needed.
- **Use an ANSI certified lead filter.** Filters certified to the ANSI/NSF 53 standard for lead removal can be effective at reducing lead levels in water.
- **Regularly clean your faucet aerators.** Over time, particles containing lead can build up on the inside of aerator screens. Cleaning aerators regularly will help eliminate this source of lead.
- **For pregnant persons, infants, and young children.** Some populations such as pregnant persons, infants, and young children may be more at risk from the harmful effects of lead. These populations may consider taking extra precautions if their home is served by a lead or galvanized requiring replacement service line. These extra precautions may include having their drinking water analyzed for lead, using an alternative source of water (such as bottled water), or utilizing a filter certified to ANSI/NSF 53 standard for lead removal.
- **Replace lead containing plumbing fixtures.** Many old faucets, valves and other plumbing fixtures may contain lead. Identify if your building's plumbing fixtures contain lead and replace them when appropriate.

#### What Can You Do About Your Lead Status Unknown Service Line?

Please contact the City of Huber Heights, Engineering (Engineer@hhoh.org), if you would like to self-identify and verify the material of your service line and have not yet done so.

**For More Information, Please Contact:** City of Huber Heights, 937 233-1423 or email Engineer@hhoh.org, visit U.S. EPA's website at [www.epa.gov/lead](http://www.epa.gov/lead), or visit Ohio EPA's [Learn About Lead | Ohio Environmental Protection Agency](#) website. For information about other lead exposure, please visit the Ohio Department of Health's [Childhood Lead Poisoning](#) website.

*Please share this information with all the other people in this home or building, especially those who may not have received this notice directly (for example, people in apartments, nursing homes, schools, and businesses). You can do this by posting this notice in a public place or distributing copies by hand or mail.*
